Project Overview

Online Shopping System is a web based E-Commerce application where user shall shop product online, browse product, place orders online, make secure payments, track order deliveries, and manage returns. The platform aims to provide a seamless shopping experience while helping the business expand its customer base and improve operational efficiency.

Business Objective

1. Increase Online Sales
2. Improve Customer Satisfaction
3. Reach Customer to wide areas
4. Reduce Dependency on physical stores
5. Provide a secure digital shopping platform

Business Problem Statement

Currently, customers must visit physical stores to purchase products, which limits convenience and business reach. The organization lacks an online platform for browsing products, placing orders, and making digital payments, resulting in missed sales opportunities and a less competitive customer experience.

Project Scope

In Scope

- User Registration
- Login
- Product Search
- Product Categories
- Product Details
- Shopping Cart
- Wishlist
- Checkout
- Online Payment
- Order Tracking
- Return Requests
- Customer Support

Out of Scope

- International shipping
- Cryptocurrency payments
- AI chatbot
- Voice shopping
- Multi-language support

StakeHolders

Stakeholder Responsibility

Business Owner	Defines business goals
Business Analyst	Gathers and documents requirements
Product Owner	Prioritizes business requirements
Project Manager	Plans and monitors the project
Developers	Build the application
QA/Testers	Verify functionality
Customers	Use the application
Delivery Partners	Deliver orders
Customer Support	Resolve customer issues
